

RECYCLE YOUR WASTE PIPETTE TIP BOXES FOR FREE

GIVE YOUR WASTE PLASTIC A PURPOSE!

Your company needs an effective solution to reduce waste and help you reach your business's sustainability goals. Plastic to Purpose makes it easy to recycle previously hard-to-recycle pipette tip boxes. Your waste can be turned into a variety of useful, eco-friendly products such as retail food baskets, street furniture, building materials and roadside kerbs.

With fortnightly collections a 240L wheelie bin holding 220 pipette tip boxes can produce 230 retail food baskets annually. A 660L wheelie bin of 600 pipette tip boxes could produce 160 roadside edging kerbs annually.

Achieve your sustainability goals with the Plastic to Purpose program. Contact us for more information.

RECYCLING USED PIPETTE TIP BOXES HAS NEVER BEEN EASIER

- ✓ Complimentary workplace collections can be arranged where it is environmentally viable.
- ✓ Waste will be collected directly from your business in bins provided by us on a weekly or fortnightly schedule.
- ✓ We'll manage your waste for you through our Plastic to Purpose recycling scheme, giving your waste plastic a new purpose.
- 📞 Connect with us today to turn your sustainability goals into reality.

Plastic to Purpose is only available for accounts where the volume of pipette boxes warrants inclusion in the scheme. Please contact your territory sales manager if you would like more information. Collection for SLS tip boxes only.

We produce all our promotional literature including catalogues on FSC certified paper and offset the impact of our promotional activity by printing on World Land Trust carbon balanced paper. We also support the One Tree Planted initiative.

Plastic to **PURPOSE**

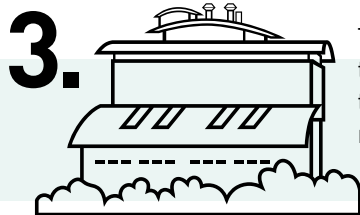

How it works:

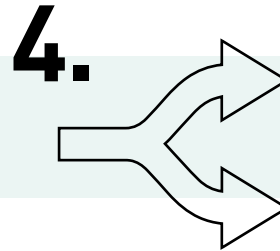

SLS will provide you with the containers necessary to manage your tip box waste effectively.

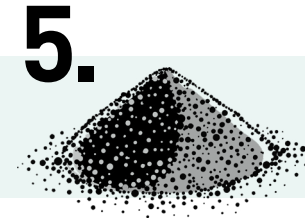

We will empty the container either weekly or fortnightly with waste being compacted for efficient transportation.

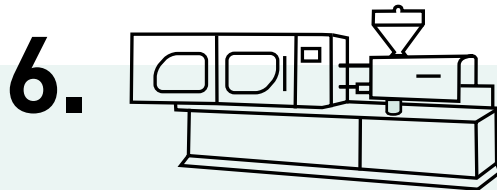

The waste is transported to the regional recycling facility.

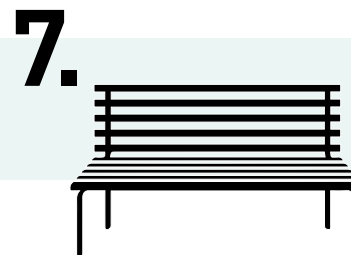

Using a conveyor-system the waste is segregated into different waste streams.

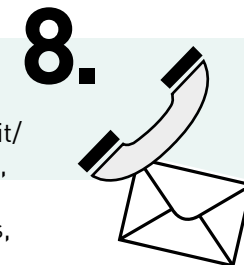

The segregated plastic is shredded into pellets/granules.

The granulated plastic is moved to an injection moulding facility as raw material for new products.

New products using recycled plastic – retail fruit/vegetable baskets, street furniture, building materials, roadside kerbs.
