

The Clear Choice for High-quality Imaging

Using Thermo Scientific™ Nunc™ Glass Bottom Dishes in your research applications gives you the flexibility to convert your culture device into an imaging device. This means you keep the same seeding density, media volume and culture conditions.

The Nunc glass bottom dish combines the convenience of a standard 35mm cell culture dish with the imaging benefits of coverglass to provide the optimum optical characteristics required for high-magnification microscopy and confocal image analysis.

Improve the quality of your high resolution cell culture images. These dishes are ideal for observation at high magnification in a variety of applications.

Reduce media evaporation and contamination.

The dish lid minimizes evaporation, at the same time keeping the contents free from airborne contaminants. Improve microscopic compatibility and eliminate issues related to well size and number.

Knowledgeable support.

Our Technical Support team can guide you in streamlining your lab's cell culture workflow. Consult with us for recommendations to optimize all your cell culture processes.

Applications:

- Fluorescence microscopy
- Phase contrast microscopy
- Confocal microscopy
- Live cell imaging
- Differential interference contrast microscopy
- Fluorescence *in situ* hybridization (FISH)

Specifications

Glass Thickness	0.16-0.19mm Borosilicate Cover Glass
Size of Dish	35mm
Working Volume	3.0mL

Notes: The cover glass in the bottom cannot be detached. Do not use with methanol, ethanol, acetone or chloroform. Glass bottom dishes are not available in Japan.
